

Safe Home Visiting for CHSP

workforce

Are you new to home visiting or have you been doing it for years and want to refresh your skills? Either way, **Safe Home Visiting** will help make your visits more productive and safer.

This session will use realistic case scenarios and participant experiences to explore and develop good practice policy, procedures, and strategies for home visits. Key topics include identifying safety issues, assessing when it is safe to visit, and managing tricky situations. Participants will gain practical safety tips and strategies, learn safer client approaches and good risk assessment practices for home visits. Additionally, the session will focus on supporting agency policies, maintaining client-centred practices, setting clear boundaries, and safeguarding both emotional and physical well-being.
